

The Water Pillow

INVENTOR: Ann Marie Cuzzo, 12 Summit
Place, Croton-on-Hudson, NY 10520

ABSTRACT

Primarily this is a pillow that consists of cloth material to encase goose down. Sides are sewn together to form a pillow, except for one side which will remain open to formulate a cavity in the interior to receive the water hold within the main body.

Internal zipper closure thus insuring proper restraint of the water hold.

External zipper on open end of removable pillow cover, as a means of rendering the water pillow as a whole.
